## SAFE DRIVING TECHNIQUES FOR GROUPS

Drive4Work is an ideal road safety awareness program for employees, athletes and community groups. The standard program is conducted over 3 hours and targets:

- Reasons for crashes
- Low risk driving techniques
- Alcohol and drug driving
- Planning for a safer future

However, the course has been modified for clients with specific requirements and timeframes. It is modular and can run for up to two days incorporating company policies and nationally recognised qualifications.

The program is facilitated, using adult learning techniques to encourage participants to participate and engage in their own learning.

This allows participants to feel they are in control of their learning, have discovered the information and developed their own ideas and solutions.

It's proven that these techniques are the most effective in terms of adult learning and behaviour change in a training environment.
